cutsio.com

AI Video Infrastructure for Large Video Libraries.

Cutsio

Presented by :
Rish Agarwal, Founder

Email Address :
rish@cutsio.com

Why Another Video Platform?

Replace 6 platforms with one.

Store like *Dropbox*
Search like *Google*
Pre-edit like *Descript*
Send like *WeTransfer*
Stream like *Vimeo*
Ask like *ChatGPT*

Problem Statement

01

Ingestion

Distributed teams need one place to ingest all their footage.

03

Searching

Finding the right clips among thousands of videos takes hours.
Manual visual search is nearly impossible.

02

Culling

Culling through hours of footage is slow and time-consuming.

04

Final Delivery

Final delivery often requires a separate platform.

Our Solution

01

One Upload Link

- Invite anyone to upload
- Video lands in your library
- AI indexes automatically
- Search instantly

02

Upload from any platform

Import videos directly from:

- Google Drive Link
- Dropbox Link
- Google Photos Link
- Vimeo Link

03

Lightning-fast culling

- Once Uploaded, Cutsio generates instant hover previews.
- Review hundreds of clips in minutes, directly in the browser.

AI Search, Super powered.

Semantic Search

If your clips have audio (eg: interviews), semantic search can search not only by keywords but also by meaning.

Eg: Instead of searching for “camera”, you can search for “give me all the clips where there was a discussion about photography” and Cutsio will surface everything by meaning

Visual Search

Cutsio can index videos visually. Every frame becomes searchable using natural language.

Eg: “Car door”, “Construction workers”, “Moving vehicles” will surface exact timestamped videos of exactly where those things are among all the indexed videos instantly.

Still, Why Cutsio?

01

Pay by footage length, not size

Traditional storage penalises you for shooting high-quality footage.

Cutsio doesn't care about size of the file.

02

AI Summaries, Transcripts, Tags & More

Every upload gets them. Automatically.

03

Any format, as long as it's video

Shot on iPhone or Canon Cinema Camera?
If you can play it, Cutsio can handle it.

04

ARRI / RED RAW + ProRes Pairs

Enterprise plan supports uploading and saving RAW and ProRes asset files. RAWs are treated as objects and ProRes are immediately converted to streamable assets with all the AI superpowers
